

FLYNN CHAMBERS

Solutions Architect | AI Engineer | MSc Cyber Security

Brisbane, Australia • flynnnguychambers@gmail.com • [linkedin.com/in/flynn-chambers-tech](https://www.linkedin.com/in/flynn-chambers-tech)

PROFESSIONAL SUMMARY

I've spent the last five years building, securing, and automating infrastructure across 20+ organisations, and increasingly figuring out where AI can make that work meaningfully better. My MSc thesis was an AI-powered XDR alert triage system using local LLMs, and I've been shipping AI-driven tooling in production environments since: automated security auditing across Microsoft tenants, LLM-powered data orchestration, and custom integrations using Graph API and modern development frameworks.

What I bring is the combination of real engineering depth and the ability to move fast. I understand the infrastructure underneath (cloud, identity, security, networking) so I'm not building AI features in a vacuum. I know how to take a messy real-world problem, scope a solution, get stakeholder buy-in, and ship something that works. I've done that as a startup founder scaling to \$20k MRR, as a service lead managing \$700k+ ARR, and as an engineer building tools that cut hours of manual work down to minutes.

EMPLOYMENT HISTORY

Solutions Consultant | Smile IT Apr 2025 – Present

- Client-facing solution design across business and technical requirements, scoping engagements, balancing timelines and budgets, and translating complex problems into actionable delivery plans.

Systems Engineer, Service Lead | Tribe Technology (MSP) Jan 2025 – Apr 2025

- Built multi-tenant tooling using Microsoft Graph API for real-time security auditing and automated policy deployment across 20+ client environments, reducing days of work to minutes.
- Led end-to-end cloud migrations (on-prem to Intune/Entra ID) for 13+ businesses, owning the technical execution, project planning, client communication, and post-migration support.
- Ran CIS v4 security uplift programmes; lifted Microsoft Secure Scores from ~40% to 80%+ across the client portfolio.
- Applied PowerShell, Bash, and Graph API automation to systematically remove manual overhead, cutting device provisioning time by 62% (2 hours to 45 minutes).
- Service Lead for 20+ enterprise clients: technical roadmaps, \$700k+ ARR in SLA agreements, stakeholder relationships, and senior escalation handling.
- Drove \$100k+ in project revenue through proactive solution scoping and vendor management (Pax8, Ingram Micro).

Founder / CIO | Nhabit (3D Architectural SaaS) Nov 2021 – Jan 2025

- Directed the full SDLC for a 3D visualisation SaaS product from concept to \$20k MRR: engineering specs, sprint planning, and iterative releases against defined product milestones.
- Architected and deployed the company's full technical stack from zero: M365, SharePoint, Azure, Entra ID, and security configuration across a cloud-first product.
- Scaled the team from 2 to 12 people: end-to-end recruitment, onboarding, performance management, and building a culture people wanted to stay in.
- Reported directly to investors and the board with strategic and financial updates. Managed all commercial relationships including customer acquisition and contract negotiations.

Systems Support & Field Engineer | Intellium Jan 2023 – Sep 2023

- Handled 18–24 daily tickets across hardware, software, and networking; consistently met SLAs across Windows Server, Active Directory, and networking infrastructure.
- Delivered field deployments across Auckland: rack installs, cabling, network configuration, and AD administration. Focused on root cause analysis over ticket closure.

IT Trainer | Techorium NZIIT Sep 2023 – Dec 2024

- Designed and delivered technical curriculum to 50+ students across Networking, Security, SQL, and Microsoft platforms. Built hands-on lab environments for AD/Entra ID instruction.
- Maintained individual progress tracking and built personalised improvement plans for each student.

PROJECTS

Argus: AI-Powered XDR Triage

MSc Thesis / Product Concept

Architected an AI-powered security alert analysis system using local LLMs. Successfully processed 1,000 synthetic XDR alerts with human-level triage accuracy. Currently exploring commercialisation as an MSP-native AI SOC tool for small-to-mid MSPs.

AskIT: M365 Tenant AI Assistant

Web App: Graph API + AI

Building an AI assistant platform that plugs into Microsoft 365 tenants via Graph API, allowing users to query tenant configuration, security posture, and user data using natural language. Designed for MSPs and IT teams managing multiple environments.

Portfolio & Side Projects

flynnchambers.com

A collection of side projects built for fun and learning, hosted on my portfolio site. Includes catGPT (a parody AI chat app serving curated cat videos), Jobber (a CV optimisation tool), and other experiments across full-stack JavaScript, Cloudflare Workers, and API integrations.

Hardened Self-Hosted Infrastructure

Homelab: Proxmox, Docker, Cloudflare

Maintain a private cloud ecosystem hosting Nextcloud and Immich on dedicated hardware. Implemented a Zero Trust access model using Cloudflare Tunnels, internal firewalls, and reverse proxies. Proxmox, Docker, and Linux VMs for service isolation and resource management.

EDUCATION

Master of IT: Cyber Security & AI Jul 2024 – Jul 2025

Whitecliffe College, Auckland, New Zealand

- Graduated with Distinction, maintaining a >90% average across all assessments.
- **Thesis, Project “Argus”:** Architected an AI-powered XDR alert analysis system using local LLMs; processed 1,000 synthetic security alerts with human-level analysis.
- Authored specialised research papers on Data Privacy and User Data Control for the New Zealand regulatory landscape.

Level 5–7 Diploma: Cloud Management Jan 2021 – Nov 2022

Techtorium NZIT, Auckland, New Zealand

- Excellence Award: recognised for consistent academic performance with a >90% assessment average.
- Professionalism Award: commended for building professional relationships and active participation in industry networking.

SKILLS

AI & Machine Learning

Local LLM Deployment, Prompt Engineering, AI-Powered Security (XDR), Unstructured Data Orchestration, RAG Architectures, AI Agent Development

Software Development

React, Next.js, Vite, Node.js, Python, SQL, REST APIs, Full-Stack JavaScript, Rapid Prototyping

Cloud & Identity

Microsoft Entra ID, Intune (MDM/MAM), M365, SharePoint, Azure Compute, Cloudflare Pages/D1/R2

Cyber Security

CIS v4 Controls, Security Uplift Programmes, Data Privacy & Governance, SSL/TLS, MFA, Compliance Auditing

Automation & DevOps

PowerShell, Bash, Microsoft Graph API, Docker, Linux (Ubuntu/Arch), Git, GitHub, Azure DevOps, CI/CD Pipelines

Solution Architecture

SDLC, Technical Discovery, Solution Scoping, Cloud Migration Design, Multi-Tenant Architecture, System Integration

Project & Consulting

ITIL v4, Sprint Planning, Roadmapping, SLA Compliance, Stakeholder Management, Executive Reporting, Vendor Relations

Infrastructure

Windows Server, Active Directory, Veeam Backup, DNS/DHCP, Firewalls (Fortinet), VLANs, Proxmox, Disaster Recovery

CERTIFICATIONS

Microsoft AZ-900 | Microsoft SC-900 | Microsoft MS-900 | Microsoft SC-300 | NZQA US4098 | Fortinet NSE 1–3
